

CineMate

CineMate is a movie recommendation platform designed to enhance the movie-watching experience by offering users personalized movie suggestions based on their viewing history, preferences, and ratings. Users can create profiles to rate, review, and save their favorite movies while receiving tailored recommendations that match their tastes. The platform supports two main user types , Users and Administrators.

Regular users can browse a vast collection of movies, rate and review films, and view recommendations. Users are also able to act as critics by writing reviews and sharing their opinions, which can be viewed by other users. This fosters a community-driven environment where movie insights and opinions are shared freely among all users, enhancing engagement.

Administrators manage the platform, ensuring smooth operations, moderating user content such as reviews, and overseeing the addition of new movies and features. Administrators also handle system maintenance and ensure that all user-generated content aligns with community guidelines.

CineMate aims to simplify the movie discovery process, making it easier for users to find films that match their interests while also allowing them to contribute their own reviews for others to benefit from. The platform provides an engaging environment where users can discover, critique, and share movies, while administrators ensure the platform remains a safe and enjoyable space for all.

Modules

Admin

- login
- view users
 - verify users
- send notifications
- manage preferences
- view complaints
 - send reply
- view rating and review

Users

- register
- login if verified
- add and manage user preferences
- view movies
 - add to favourites
- rate a movie

- review a movie
- view notifications
- send complaints
 - view reply
- send rating and review
